## APCP Information – Tummy Time Ideas

Practical advice to help parents and carers

### Tummy Time to Play – Every Day

The 'Back to Sleep' campaign has reduced the incidence of Sudden Infant Death Syndrome. As a result of the campaign babies are spending less time on their tummies during the day. This, however, can lead to:

- A delay in developing movement skills
- A flattening of the side or back of the head
- Co-ordination problems in later childhood

The good news is that something as simple as Tummy Time can lessen or eliminate all of these potential problems.

### Tummy Time is Important Because it:

- Helps promote a more rounded head shape
- Improves development of head control and strengthens muscles of the head, neck & back
- Assists with attainment of motor milestones
- Enhances vision and hand-eye co-ordination

### Tummy Time for Newborns

Newborns will benefit from Tummy Time – start small - aim for a few minutes at a time, several times a day.

Tummy Time activities at this age are centred around holding and soothing activities:

- Lay your baby across your lap instead of upright on your shoulder, to settle or sooth them
- Lay down with your baby, chest to chest
- Carry your baby tummy side down sometimes
- Your baby may enjoy a massage after a bath, lying on their tummy

## Tummy Time for Older Babies

At 3 weeks babies will begin to recognise faces and sounds – this is a perfect time to incorporate more Tummy Time activities:

- Lay your baby on their tummy on the floor and get down on the floor with him/her – encourage your baby to lift and move head to look at your face or by talking and singing to him/her
- Place a small rolled up towel under your baby's chest and upper arms to prop him/her up – scatter toys around to encourage looking and reaching
- Play aeroplane around the room
- As your baby learns to roll from his/her back you will find you no longer need to 'schedule' Tummy

### Important to remember:

- Always place your baby to sleep in a flat clear space on their back
- Begin Tummy Time from birth
- Make sure your baby is awake and is never left alone on his/her tummy
- Always place your baby on a firm flat surface
- Don't be discouraged, with practice and interaction your baby will start to enjoy being on their tummy.

### Concerned about your baby's development?

Most babies will be pushing up on his/her forearms and lifting and holding his/her head by 3 months of age. The following signs may be a cause for concern:

- Difficulty lifting head
- Stiff legs with little or no movement
- Pushing back with head
- Head turning to one side only

**IF YOU NEED FURTHER ADVICE ABOUT TUMMY TIME, OR HAVE CONCERNS ABOUT YOUR BABY'S DEVELOPMENT, CONTACT YOUR HEALTH VISITOR OR PAEDIATRIC PHYSIOTHERAPIST.**

**This leaflet has been produced after an initial review of literature and where there is a lack of evidence, a consensus of expert opinion's agreed, correct at the time of publication.**
